

SOLARCHITECTURE

sun as a building material

An innovative Swiss website on solar architecture

The main goal of this website is to promote the construction of solar buildings by shifting the attention from technology to architecture. Real examples and stories of best practice prove today the feasibility and the quality of solar buildings in terms of aesthetics, construction technology and sustainability. By emphasizing architecture, **www.solarchitecture.ch** encourages both architects and clients to adopt new building concepts.

Thanks to our close collaboration with the department of architecture (module building and construction) at ETH Zurich we are able to provide accurate technical details.

BECOME A PARTNER

If you would like to present yourself as a key player in the field of solar architecture contact us to find out about the different options of collaboration.
